**Mechanical Team Meeting**
We discuss our plans for final presentation of the project at the Gambel. The regular power strip would supply the necessary amount of power for our project. The keypad and LCD screen was received on this day.

**Electrical Engineering Team Meeting**
The Electrical Engineering Team met on this day to continue progressing on our senior design project. We began researching how to interface our keypad with the microprocessor in order to accept the pilot’s input. We were able to configure the keypad by calling the row and column and receive the input from it.

**Goal**
The goal for next week is to start working on the brochure for the final presentation and finishing programming the LCD and the multiplexer for the sensors.
